1. PROJECT DESCRIPTION

The proposed Penitencia Water Treatment Plant (PWTP) Residuals Management Project (Project) is located at the Santa Clara Valley Water District's (Valley Water's) PWTP at 3965 Whitman Way in San Jose, as shown in Figure 1. Constructed in 1974, the PWTP can treat and deliver up to 42 million gallons of potable water and is an essential part of Valley Water's water supply system.

The purpose of this Project is to address age, capacity, efficiency, and reliability issues with the PWTP's existing Residuals Management System (RMS) to ensure the plant efficiently and reliably provides potable water to water retailers in Valley Water's service area while meeting applicable regulatory standards. The plant's RMS is one of the major treatment components. It receives and processes recovered washwater and diluted sludge that is produced as part of the daily operations of the PWTP. At completion of the RMS process, clarified water is returned to the start of the treatment process and sludge solids are hauled to landfills.

The proposed Project includes the following major items of work:

a. Removal and replacement of an existing manually operated sludge withdrawal system with an automated system in all three (3) of the plant's sedimentation basins;

b. Constructing new washwater handling and treatment facilities to replace the existing washwater equalization basins;

c. Constructing new sludge handling and dewatering facilities, including state-of-the art centrifuge technology, to replace the existing sludge holding ponds and belt press; and

d. Installing associated mechanical, chemical, electrical, instrumentation and control systems.

2. ZONE BENEFITS

The proposed Project work will benefit only customers of Zone W-2 (North County).

3. PROJECT RIGHT OF WAY

Work on the proposed Project will occur within the PWTP site and neighboring parcel, both properties of Valley Water. No additional right of way will be required.

5. PROJECT COSTS

The estimated costs to plan, design, and construct the proposed Project is $95.36 million (with inflation). The Project is included in the Capital Improvement Program (CIP) Fiscal Year (FY) 2025-29 Five-Year Plan and in the FY 2024-25 Adopted Budget.
