When looking at the challenges being faced by the Santa Clara Valley Water district, there is a need for greater community buy-in as well as involvement in adopting solutions. Unfortunately, issues like low flow toilets and low-flow showers, require changes in consumer behavior to be successful. Having a low-flow shower head is of little benefit unless the user changes their shower practices.

My company (Spiroflo) has developed a device which reduces the time it takes to deliver hot water to the shower outlet, saving time, energy and wasted water. However, the device delivers a better, faster shower, by delivering hot water

faster (in 80% of cases consumer trial) while using up to 17% less water. The biggest game changer, is that this low cost device requires no change in consumer behavior.

Would love to provide additional information on this no-maintenance water saving tool. My email is amiller@spiroflo.com.
