2. SCOPE OF SERVICES

This Schedule S, Scope of Services describes the professional engineering services to be performed by Consultant for the District's Raw Water System Master Plan, Phase I (Project). The District may, at its discretion, choose to negotiate an amendment to this Agreement with Consultant, as engineer-of-record, for engineering support services. The District may, at its discretion, choose to initiate a new consultant agreement selection process for services for any subsequent phase(s) and/or utilize District staff to perform such services.

3. PROJECT OBJECTIVES

The goal of the Raw Water System Master Plan, Phase I (RWMP) is to identify needed improvements and optimize operations of the system. The objectives of the RWMP are to define current and future levels of service, identify distribution system limitations and inefficiencies, and make recommendations to improve the current and future system reliability and efficiency based on hydraulic modeling and professional judgement.

4. PROJECT BACKGROUND

The District manages an integrated water resources system that includes the supply of clean safe water, flood protection, and stewardship of streams on behalf of Santa Clara County's businesses and 1.8 million residents. The District's raw (untreated) water supply is critical to the continuous operation of the District's three potable water treatment plants, the recharge of groundwater aquifers to avoid subsidence, flow in streams for environmental purposes, and providing water to surface water customers. The raw water system is facing numerous challenges. The system is aging, portions of the system are not redundant, and parts of the system may be undersized for current or future demands. The system can likely be operated more efficiently and reliably if improved.

5. ASSUMPTIONS AND REQUIREMENTS

A. General Assumptions and Requirements

- 1) Manage Scope of Services.** Consultant shall manage the Scope of Services such that the work is completed within the Not-to-Exceed Fees limit and in accordance

SCHEDULE S SCOPE OF SERVICES

Any schedule delays will be highlighted in progress reports by Consultant with each invoice submittal.
- 4) Consultant shall be entitled to rely on the accuracy of all data provided by District and the District shall make reasonable efforts to obtain data needed by Consultant, if not in possession of such data.
- 5) Confidential information transmitted to the consultant shall be clearly marked as such.
- 6) Data requests would typically require a one-week turnaround time from District to keep project moving forward efficiently; however, depending on type of request, a mutually agreeable turnaround time will be established at the onset of request. Any schedule delays will be highlighted in progress reports by Consultant with each invoice submittal.
- 7) The District will schedule meetings to discuss aspects of the Project with District staff as needed and will provide meeting space for all meetings.

Task 3—Develop Hydraulic Models

The Consultant shall develop three dynamic hydraulic models of the District's raw and treated water distribution systems using the Innovyze Infowater software. These models will be capable of providing surge analysis; and will be calibrated to SCADA data.

- 3.1 The Consultant shall review existing reports, models, and data, and shall interview District staff to gather information needed to develop detailed hydraulic models of the raw and treated water distribution systems and understand system operations and constraints.
- 3.2 The Consultant shall analyze and QA/QC District data for model network build.

The models shall be calibrated to SCADA data, shall be capable of providing pressure surge analysis, and shall be developed according to industry standards. Calibration shall meet following criteria:

Flow criteria

-
- (a) Modeled main flows (when the flow is more than 10% of the total demand) should be within \pm 5% of the measured flows.
 - (b) Modeled main flows (when the flow is less than 10% of the total demand) should be within \pm 10% of the measured flows.
-

Pressure¹ criteria

¹ The pressure head is the pressure P (measured in psi or other unit) divided by the specific weight of water (γ). The pressure head is measured in feet (or meters).

SCHEDULE S SCOPE OF SERVICES

-
- (c) 85% of field test measurements² should be within ± 0.5 m (1.6 ft) or $\pm 5\%$ of the maximum head loss across the system, whichever is greater.
 - (d) 95% of field test measurements should be within ± 0.75 m (2.5 ft) or $\pm 7.5\%$ of the maximum head loss across the system, whichever is greater.
 - (e) 100% of field test measurements should be within ± 2 m (6.6 ft) or $\pm 15\%$ of the maximum head loss across the system, whichever is greater.

Provide input and output files for the three Innovyze InfoWater hydraulic models, suitable for surge analysis and calibrated to SCADA data. The three hydraulic models include one model for the raw water system, and two additional models one each for the east treated water system and the west treated water system. Model facilities are described in Subsection 5(B)(13) of Schedule S. All input variables and model output files shall be delivered in electronic format.

Task 3—Assumptions

3. 15-minute interval data and archived control settings at critical facilities are available via SCADA.
4. If proposed calibration criteria cannot be achieved due to lack of data or due to inaccurate data, and if the Consultant can demonstrate why it cannot meet the calibration criteria using the data supplied by the District, then the Parties will evaluate what additional data may be needed or what additional effort is required to acquire accurate data. If the Consultant cannot acquire the additional and/or accurate data and complete the calibration work within the funds allocated to this Task 3, then the District may elect to have such additional work (i.e. acquiring additional data and/or correcting inaccurate data) completed as Supplement Services per Task 6.3.
5. The models will not be linked to real-time SCADA; however, the models will be set up with field designations for SCADA “tags” or identifiers for future real-time SCADA linkage by District. Consultant will include at least 50 SCADA tags in the model, and may include additional tags if District provides required SCADA tag and sensor information, including location.

Task 4—Establish Modeling Scenarios

² The test measurements can be collected from the District’s SCADA system at any point in time. SCADA records the hydraulic grade line (HGL) at many nodes in the network and also the nodal elevation (z). The pressure head (P/γ) can be obtained from the following relationship: $P/\gamma = \text{HGL} - z$.

SCHEDULE S SCOPE OF SERVICES

The Consultant will establish up to 20 total operational scenarios to be applied to raw water system model. Modeling will be conducted for system capacity and surge analysis, and system optimization. The scenarios will be designed to evaluate the raw water system's ability to meet level of service goals developed under Task 2, any existing or future system capacity constraints, operational inefficiencies including "band-aid" operations that keep the system running and potential new facilities.
